by June 7th

Masterclass Description:

Confidence is often treated as a trait you either have, or you don't. Behavioral science tells a different story. In this session, leadership strategist Corina Taban draws on a decade of experience leading high-stakes negotiations at Microsoft and Meta to reframe confidence as a strategic skill.

Designed for women in tech and leadership, this session explores why competence alone rarely translates into influence and provides the roadmap to move from **high performance to high impact**.

Key Takeaways

The Behavioral Model: View confidence as a skill, not a trait.

Close the Visibility Gap: Why strong performers are overlooked and how to fix it.

Strategic Self-Advocacy: Build influence without losing your authenticity.

The Bold Framework: Practical approaches for the boardroom and beyond.
